

Guide on Federal and State Summer RVP Standards for Conventional Gasoline Only

This guide is intended for quick reference purposes only. Federal volatility regulations (40 CFR 80.27) apply to “designated volatility nonattainment areas” and to “designated volatility attainment areas,” as defined in 40 CFR 80.2(cc) and 80.2(dd), respectively. For this quick reference guide, we have listed RVP limits by county, which may not coincide precisely with the borders of a nonattainment or attainment area. We have not listed RVP limits which may apply through voluntary agreements for supply of lower RVP fuel than what is otherwise required for an area. For a brief description of the federal fuel volatility regulations, see the last page of this guide. For specific information regarding borders, please consult your respective EPA regional office.

Notes to Federal and State RVP Standards

* Indicates change or proposed change in federal standard not yet federally approved.

** State run program with federally-approved State Implementation Plan (SIP).

*** Indicates there are counties or areas in counties in the state which have reformulated gasoline (RFG) requirements. See EPA's "List of Federal Reformulated Gasoline Program Areas," April 1999. RFG areas must meet a VOC emissions performance reduction standard per 40 CFR 80.41.

Denver/Boulder: The applicable federal volatility standard from June 1 to September 15 is 7.8 psi. EPA has proposed changing this to 9.0 psi beginning in the 2002 ozone season, and is preparing a final rule responding to the comment received on this proposal. We expect this final rule will be issued and effective by early summer. By letter dated April 11, 2002, EPA told the Colorado Petroleum Association that, as a matter of enforcement discretion, effective May 1, 2002, EPA will not enforce the 7.8 psi RVP standard in the Denver/Boulder area, and instead will enforce the 9.0 psi RVP standard. This enforcement discretion will continue until the rulemaking to revise the RVP standard for the Denver/Boulder area becomes effective, or until September 16, 2002, whichever is earlier. CMSA counties include: Adams (partial), Arapahoe (partial), Boulder (partial), Denver, Douglas, and Jefferson.

Eastern Texas Counties include: Anderson, Angelina, Aransas, Atascosa, Austin, Bastrop, Bee, Bell, Bexar, Bosque, Bowie, Brazos, Burleson, Caldwell, Calhoun, Camp, Cass, Cherokee, Colorado, Comal, Cooke, Coryell, De Witt, Delta, Ellis, Falls, Fannin, Fayette, Franklin, Freestone, Goliad, Gonzales, Grayson, Gregg, Grimes, Guadalupe, Harrison, Hays, Henderson, Hill, Hood, Hopkins, Houston, Hunt, Jackson, Jasper, Johnson, Karnes, Kaufman, Lamar, Lavaca, Lee, Leon, Limestone, Live Oak, Madison, Marion, Matagorda, McLennan, Milam, Morris, Nacogdoches, Navarro, Newton, Nueces, Panola, Parker, Polk, Rains, Red River, Refugio, Robertson, Rockwall, Rusk, Sabine, San Jacinto, San Patricio, San Augustine, Shelby, Smith, Somervell, Titus, Travis, Trinity, Tyler, Upshur, VanZandt, Victoria, Walker, Washington, Wharton, Williamson, Wilson, Wise, and Wood.

Federal Fuel Volatility Regulations at 40 CFR 80.27:

Standards for May are maximum standards for all regulated parties except retailers and wholesale purchaser-consumers.

Standards for June 1 to September 15 are maximum standards for all regulated parties including retailers and wholesale purchaser-consumers.

Gasoline alcohol blends meeting 80.27(d) have 1.0 psi waiver of applicable federal RVP standard.

Alaska, Hawaii, and U. S. territories are exempted from federal volatility regulations.
